Subject Index

A

Accident data analysis 843
Aluminum alloys
  Effects of section size, pouring temperatures and casting process on microstructure 285
  Expendable polystyrene process effect on microstructure 285
  Melt efficiency in high speed furnace 605
  Squeeze casting developments 135
Aluminum casting; Computer simulation of low pressure and permanent molded designs 635
Aluminum-silicon-magnesium alloys
  Aerospace casting production with consistent mechanical properties 557
  Aging characteristics of A356 and A357, titanium-refined 1
  Fracture toughness evaluation at 70F, and -320F 257
  Image analysis inspection techniques 349
  Modeling microstructure characteristics for property prediction 173
  Side pouring thin wall A357 33
  Silicon morphology vs heat treatment and solidification rate 13
  Strontium modification, effect on mechanical properties . . . 453
  Weld repair effect on fracture and tensile properties 257
Arc furnace
  Dust collector installation 59
  Electrode and energy consumption vs. charge variations 29
  Electrode consumption reduced 677
Austenite retention in heat treated high-chromium white iron 795
Automated finishing of castings 397

C

Cast Iron
  Effect of chemistry and cooling rate on nucleation, cell count and graphite morphology 263
  Fatigue behavior and crack development 385
  Graphite additions decrease chill and increase nucleation 423
  Permanent mold castings solidification time 435
  Solidification behavior at liquid-solid interface 565
  Specifications in computerized file 883
  Thermal and mechanical properties of gray, ductile, compacted graphite 615
Cerium-calcium treatment in compacted graphite iron production 367
Charge calculations using microcomputers 883
Charge manipulations conserve energy in arc furnace melting 29
Charge system automation for cupola 393
Chill decrease with graphite additions 423
Chills; Design for steel castings 167
Cleaning and finishing
  Automation 397
  Mechanization 669
Coke; Properties affecting cupola performance 825
Coldbox
  Core scrap recycled 215
  Gassing system for TEA catalyst 381
  Mold and core production system 473
  Process control 647
Compacted graphite cast iron
  Automotive applications 959
  Cerium-calcium treatment 367
  Cooling curve data related to structure 333
  Fe-C-Al alloy development 39
  Graphite morphology-impurity relationships 589
  Ingot molds 529
  Machinability 47
  Properties compared to gray and ductile 959
  Section sensitivity 589
  Solidification behavior at liquid-solid interface 565
  Solidification study 509
  Thermal and mechanical properties 615
Computer applications
  Al permanent mold and low pressure casting design 635
  Design of gray iron castings 79
  Microcomputer programs for cupola operations 883
  Microcomputer use in sand control 85
  Riser design 227
Copper alloys
  Feeding equations for leaded red brass 691
  Lead reactions at mold/metal interface 701
  Melt chemistry and gas control 729
  Ni-Al bronze slow cooling effects 913
  Ni-Al bronze weldability 893
Copper-aluminum alloys 691
Core scrap recycled 215
Coremaking; K-Y process 445
Cost study; Melting 865
Crack development in cast irons 385
Cupola
  Automatic charging system with optical sensor 393
  Coke properties affect performance 825
  Microcomputer programs 883
  Net diagrams guide operations 665
  Stack air device replaces afterburner 935

D

Defects; Related to steel pouring variables 719
Design of castings; Cut costs and improve quality by tooling redesign 361
Desulfurizers, metallic; Use in acid-melted electric furnace steel 835
Ductile iron
  Austenite formations study 499
  Heat treatment and secondary graphite formation 239
  Heavy section production 313
  Impact toughness reduced by secondary graphitization 239
  In-the-mold processing 551
  Magnesium treatment using a tundish cover 159
  Magnesium treatment using a tundish cover 53
  Molybdenum and silicon effects on secondary graphitization 487
  Riser conversion from white iron 73
  Riser design for tapered risers 147
  Thermal analysis for graphite shape prediction 307
  X-ray and metallographic study of austempered iron 499
Dust collector installation for arc furnaces 59

E

Emissions assessment of melting, inoculation, pouring 65
Energy and electrode conservation in arc furnaces 29
Energy
  Conservation with cupola stack air device 935
  Melting cost study 865
Environmental control
  Magnesium hazards reduced in ductile iron treatment 159
  Magnesium hazards reduced in ductile iron treatment 53
Expendable polystyrene process
  Formed cores 361
  Vs green sand for Al-Cu-Si alloy casting 285

F

Fatigue behavior of cast irons 385
Fatigue properties of gray iron; Effect of microstructure 777
Fatigue testing; Bending and zero tension 777
Feeding gunmetal and aluminum bronze in shell molds 691
Finite element method for cast iron plate strength analysis . . . 323
Fractographic measurements of gray iron 297
Fracture strength; Finite element method analysis in gray iron 323
Fracture toughness of aluminum T357-T6 at 70F and -320F . . . 257
Fracture toughness; Gray iron evaluation using R-curve concept 275
Furnaces; Oil fired high speed Al melting 605
Furnaces; Self supporting roof for horizontal holders 683

G

Gas evolution from carbonaceous sand additives 465
Gases in copper alloys 729
Graphite additions decrease chill and increase nucleation 423
Graphite morphology
  Control in compacted graphite cast iron 589
  Influenced by processing variables in hypoeutectic cast iron 263
  Prediction in ductile iron using thermal analysis 307
Graphitization; Compacted graphite cast iron 509
Graphitization, secondary
  Formation in ductile iron affected by Mo and Si 487
  Formation in quenched and tempered ductile iron 239
Gray iron
  Alloying for high strength and low section sensitivity 847
  CE, S and rare earth inoculation effect on solidification and microstructure 943
  CE, microstructure and solidification characteristics vs strength and chill 745
  Computer aided design 79
  Fatigue properties vs microstructure 777
  Fractographic measurements 297
  Fracture toughness evaluation using R-curve concept 275
  Strength analysis by finite element method 323
Green sand
  Compared with V-process and no bake for steelcasting 93
  Compared with expendable polystyrene for casting Al-Cu-Si 285
  Polystyrene addition effect 759
  Recycling particulated core scrap 215

H

Health; Silica dust exposure monitored by blood silicon analysis 681
Heat resistant Fe-Al-B alloys 11
Heat treatment
  Aluminum alloys A356 and A357, titanium-refined 1
  Austempered ductile iron; microstructure study 499
  Ductile iron; Mo effects on secondary graphitization 487
  Effect on microstructure relationships in Al-Si-Mg 13
  Mn-Mo-Nb-V microalloyed cast steel 625
Hotbox; Core scrap recycled 215

I

Image analysis; Aluminum microstructure measurement techniques 349
Impact toughness of ductile iron reduced by secondary graphitization 239
In-the-mold processing of ductile iron 551
Inclusions; Related to steel pouring defects 719
Ingot molds; Compacted graphite cast iron 529
Inoculation
  Emissions assessment, ductile iron 65
  Mischmetal effects on solidification and structures in gray iron 943

K

K-Y process, Microwave coremaking 445

L

Lead reactions at interface of sand and leaded copper 701
Low pressure casting; Computer simulation 635

M

Machinability of compacted graphite cast iron 47
Magnesium flare and fume reduced by tundish cover in ductile iron treatment 159
Magnesium flare and fume reduced by tundish cover in ductile iron treatment 53
Management method relationships to productivity 875
Managing foundries in the 1980's 805
Melting cost study 865
Melting; Emissions assessment, steel 65
Microwave curing; K-Y cores 445
Mold metal interface; Leaded copper alloys 701

N

Net diagrams guide cupola operations 665
Nucleation
  Compacted graphite cast iron 509
  Graphite addition effect 423

P

Permanent mold casting
  Computer simulation 635
  Solidification time of gray iron 435
Pouring
  Control reduces steel defects 719
  Emissions, gray iron 65
  Side pouring thin wall aluminum castings 33
Productivity vs management methods 875

Q

Quality control circles 611
Quality improvement and cost reduction by tooling redesign . . 361

R

Recycling scrapped cores 215
Refractories; Relining costs cut by self-supporting drum furnace roof 683
Riser design
  Computer program 227
  Conversion to ductile from white iron 73
  Modulus method extended for corner effect 193
  Tapered risers, ductile iron 147

S

Safety
  Accident data analysis 843
  Back injury prevention 687
Sand additives
  Gas evolution from carbonaceous materials 465
  Iron oxide improves surface properties of CA6NM 103
  Polystyrene additions to green sand 759
Sand mold and core production using coldbox 473
Sand reclamation; Thermal reclamation 25
Sand system control using a microcomputer 85
Sand systems; Recycling particulated core scrap in green sand 215
Scrap
  Quality study commentary 821
  Quality study 811
Section sensitivity
  Alloyed gray irons 847
  Compacted graphite cast iron 589
Shell process, Feeding equations for copper alloys 691
Silica dust exposure monitored by blood silicon analysis 681
Sodium silicate-ester binder system 201
Sodium silicate, self set; Compared with V-process and green sand in steel casting 93
Solidification
  Analysis of corner effect on freezing time 193
  Compacted graphite cast iron study 509
  Process affected by thermophysical properties of cast metals 193
  Time predictions for permanent mold iron castings 435
Squeeze casting; Automated machine development 135
Steel
  13Cr-1Ni, study 411
  Chill design 167
  Chromium-steel substitute 11
  Defects related to pouring variables 719
  Heat resistant iron-aluminum-boron alloys 11
  Low-chromium substitute for 304 stainless 655
  Metallic desulfurization 835
  Mn-Mo-Nb-V microalloy, normalized and aged 625
  Stainless alloy CA6NM processing 103
  V-process, green sand and no bake comparisons 93
Strontium modification effect on mechanical properties of A356 453
Sulfur effect in molten cast iron 423
Surface finish
  Improved with K-Y cores 445
  Polystyrene additions to green sand affect cast iron 759
  Statistical study 575

T

Thermal analysis
  Compacted graphite structure related to cooling curves 333
  Graphite shape prediction in ductile iron 307
  Relationship to strength and chill in gray iron 745
Thermal and mechanical properties of compacted graphite cast iron 615
Thermal properties of cast metals affect freezing times 193
Thin wall aluminum castings using side pour 33
Titanium-refined aluminum alloys, heat treatment effects 1
Tramp element levels in scrap 811
Triethylamine gassing system for coldbox coremaking 381
Tuyeres; Cast copper with integrally-cast copper tubes 927

V

V-process; Compared with green sand and cold set for steelcasting 93

W

Weld repair effect in aluminum T357-T6 257
Weldability of nickel-aluminum bronze 893
White iron
  17% Cr, structure study 711
  High-chromium; austenite retention factors 795
  Riser conversion to ductile iron 73
